Wright, P.S., 14

SUBJECT INDEX

Addiction, to narcotic analgesics
  nurses' fear of in pediatric cancer pain management, 4-12, 13
Adolescent(s)
  smoking prevention in childhood cancer survivors, 167-171
Adriamycin, *see* Doxorubicin
Affective response(s)
  measurement of after bone marrow transplantation, 109-117
Ambulatory care
  research priorities for nurses in, 23
Amphotericin B
  pharmacology of its lipid formulations, 125-127
    adverse effects, 127
    availability, 127
    dosage and administration, 126
    formulation and mechanism of action, 125-126
    indications, 125
    pharmacokinetics, 126
    stability and storage, 126
Analgesic(s)
  nurses' misconceptions about, 5
Anesthetic(s), local
  EMLA (eutectic mixture of local anesthetics), 38-41
    lidocaine (in EMLA), 38-41
    prilocaine (in EMLA), 38-41
Antifungal agent(s)
  amphotericin B and its lipid formulations, 125-127
Antiprotozoal agent(s)
  pentamidine, 85-87
APON, *see* Association of Pediatric Oncology Nurses
Assessment of pain
  nurses' knowledge of in pediatric cancer patients, 5
Association of Pediatric Oncology Nurses (APON)
  Delphi study to establish research priorities, 20-27 commentary, 28-30

BASES scale
  assessing response to bone marrow transplantation, 109-117, 118-119
    commentary, 118-119
Behavioral response(s)
  measurement of after bone marrow transplantation, 109-117
Behavioral training
  of motion control for radiation treatment without sedation, 55-63
    desensitizing the child, 56-58
    motivating cooperation, 58
    teaching motion control, 58-59

SUBJECT INDEX

Addiction, to narcotic analgesics
  nurses' fear of in pediatric cancer pain management, 4-12, 13
Adolescent(s)
  smoking prevention in childhood cancer survivors, 167-171
Adriamycin, *see* Doxorubicin
Affective response(s)
  measurement of after bone marrow transplantation, 109-117
Ambulatory care
  research priorities for nurses in, 23
Amphotericin B
  pharmacology of its lipid formulations, 125-127
    adverse effects, 127
    availability, 127
    dosage and administration, 126
    formulation and mechanism of action, 125-126
    indications, 125
    pharmacokinetics, 126
    stability and storage, 126
Analgesic(s)
  nurses' misconceptions about, 5
Anesthetic(s), local
  EMLA (eutectic mixture of local anesthetics), 38-41
    lidocaine (in EMLA), 38-41
    prilocaine (in EMLA), 38-41
Antifungal agent(s)
  amphotericin B and its lipid formulations, 125-127
Antiprotozoal agent(s)
  pentamidine, 85-87
APON, *see* Association of Pediatric Oncology Nurses
Assessment of pain
  nurses' knowledge of in pediatric cancer patients, 5
Association of Pediatric Oncology Nurses (APON)
  Delphi study to establish research priorities, 20-27 commentary, 28-30

BASES scale
  assessing response to bone marrow transplantation, 109-117, 118-119
    commentary, 118-119
Behavioral response(s)
  measurement of after bone marrow transplantation, 109-117
Behavioral training
  of motion control for radiation treatment without sedation, 55-63
    desensitizing the child, 56-58
    motivating cooperation, 58
    teaching motion control, 58-59

Biologic response modifier(s)
liposomal MTP-PE, 161-163
Bone marrow transplantation
development of BASES scale, 109-117, 118-119
measurement of behavioral, affective, and somatic responses to pediatric, 109-117
commentary, 118-119
parental concerns after child's discharge after, 93-101

Cancer pain
review of literature on pediatric, 6-7
survey of nurses' knowledge of management of pediatric, 4-12
commentary, 13
Cancer risk
smoking prevention in childhood cancer survivors, 167-171
Cardiomyopathy
doxorubicin-induced, 152-160
Catheter(s)
developing video on care of permanent right atrial, 120-124
Central line thrombus
detection and treatment of, 146-151
case study, 148
chemotherapy effects, 147-148
follow-up, 150
hemostasis, 146-147
intervention, 150
nursing role, 150-151
treatment options, 148-150
Chemotherapy
and central line thrombus detection and treatment, 147-148
doxorubicin-induced cardiomyopathy, 152-160
liposomal MTP-PE for newly diagnosed osteosarcoma, 161-163
Childhood cancer
parents' responses to epidemiology study of, 71-84
program for school nurses on, 88-90
smoking prevention in survivors of, 167-171
Childhood cancer survivor(s)
late effects of treatment in as research priority, 22, 26, 28-30
promoting health in (editorial), 91
smoking prevention in, 167-171
Cigarette smoking
smoking prevention in childhood cancer survivors, 167-171
background, 167-168
family approach, 170
implications for nursing interventions, 168
societal approach, 168-170
youth and smoking, 168
Compliance
fever instruction with thermometers by contract, 164-166
Congestive heart failure
due to doxorubicin-induced cardiomyopathy, 152-160
Coping strategy(ies)
and stressors of fathers of children with cancer, 102-108

Cotrimoxazole
pentamidine as alternative to, 85-87

Death
near-death experiences in children, 139-144
Deoxycholate amphotericin B, *see* Amphotericin B
Doxorubicin
cardiomyopathy induced by, 152-160
case presentations, 157
incidence, 152-153
nursing implications, 157, 159
outcomes, 154
physical findings, 154
prevention and detection, 154-156
risk factors, 153-154
theories and future hope, 156-157
treatment, 154

Education
bringing childhood cancer information to school nurses, 88-90
fever instruction for parents with thermometers by contract, 164-166
see also Patient education
EMLA
in painful cancer therapy procedures, 38-41
adverse reactions, 40
availability and formulation, 39
dosage and administration, 39, 40
indications, 38
mechanism of action, 38
pharmacokinetics, 38-39
Emotional issues
becoming a "professional friend" to patients (editorial), 137
coping with in pediatric oncology nursing (letter), 92
nursing care and presence as therapeutic interventions (editorial), 43
Environment
comparison of three nursing theories' views on, 15
Environmental exposure(s)
parents' responses to epidemiology study of childhood cancer, 74, 77, 81
Epidemiology study(ies)
parents responses to study of childhood cancer, 71-84
effects of stress, 78
environmental exposures, 74, 77
family health history, 78
Ethical issues
informed consent in pediatric oncology, 128-133
nontherapeutic research procedures in children with cancer, 134-136
parental refusal of treatment, 31-33
Eutectic mixture of local anesthetics, *see* EMLA
Experimental research
level III, 34-37

Faces Pain Scale
measuring pain in pediatric oncology ICU patients, 64-68, 69-70

Family health history
parents' responses to epidemiology study of childhood cancer, 78, 82
Father(s), of pediatric oncology patients
stressors and coping strategies of, 102-108
see also Parent(s)
Fever, in immunosuppressed children
instruction with thermometers by contract, 164-166
compliance problems, 165-166
sample information sheet, 165
sample "contract" form, 166

Health
comparison of three nursing theories' views on, 15
promoting in pediatric oncology patients (editorial), 91
Health promotion
in pediatric oncology patients (editorial), 91
Hemostasis
in central line thrombus detection and treatment, 146-147
Human(s)
comparison of three nursing theories' views on, 15

Immunocompromised oncology patient(s)
pentamidine for *Pneumocystis carinii* pneumonia in, 85-87
Immunosuppressed patient(s)
fever instruction with thermometers by contract for parents of, 164-166
Informed consent
nursing perspective on in pediatric oncology, 128-133
elements of, 130
in practice, 130-132
in theory, 128-130
nurse and physician responsibilities in, 130
strategies to improve process of, 131
Inpatient care
research priorities for nurses practicing in, 23
Intensive care unit
measuring pain in pediatric oncology patients in, 64-68, 69-70
research priorities for nurses practicing in, 23
International pediatric oncology nursing
in Japan (letter), 138
Iowa Cancer Pain Relief Initiative
survey of nurses' knowledge of pediatric cancer pain management, 4-12

Japan
pediatric oncology nursing in (letter), 138
Journal of Pediatric Oncology Nursing
personal impact of (letter), 2-3
production process (letter), 2

Legal issues
parental refusal of treatment, 31-33
Leukemia
comparison of three nursing theories as guide for care of, 14-19
Level III research, 34-37
Lidocaine
in EMLA (eutectic mixture of local anesthetics), 38-41

Lipid formulation(s)
of amphotericin B, 125-127
Liposomal MTP-PE (muramyl tripeptide phosphatidylethanolamine)
pharmacology of, 161-163
adverse reactions, 162
availability, 161
dosage and administration, 162
indications, 161
mechanism of action, 161
pharmacokinetics, 161
stability and storage, 161-162
Local anesthetic(s)
EMLA (eutectic mixture of local anesthetics), 38-41
lidocaine (in EMLA), 38-41
prilocaine (in EMLA), 38-41
Long-term survivor(s), of childhood cancer
late effects of treatment in as research priority, 22, 26, 28-30
smoking prevention in, 167-171

Motion control
behavioral training of for radiation treatment without sedation, 55-63

Narcotic analgesic(s)
nurses' knowledge of in pediatric cancer pain management, 4-12
Near-death experience(s)
of children, 139-144
Neuman's Systems Model
comparison of three theories for pediatric oncology nursing care, 14-19
environment, 15
health, 15
humans, 15
nursing and nursing process, 15-16
nursing care plan using, 16-17
Nontherapeutic research procedure(s)
in children with cancer, 134-136
Nurse-patient relationship
becoming a "professional friend" (editorial), 137
Nursing care
comparison of three nursing theories' views on, 15-16
nursing perspective in pediatric oncology (editorial), 1
when nursing care becomes the therapy (editorial), 43
Nursing process
comparison of three nursing theories' views on, 16
Nursing theory, *see* Theory(ies), nursing

Objective Pain Scale
measuring pain in pediatric oncology ICU patients, 64-68, 69-70
Orem's General Theory of Nursing
comparison of three theories of pediatric oncology nursing care, 14-19
environment, 15
health, 15
humans, 15
nursing and nursing process, 15-16
nursing care plan using, 16, 18

Osteosarcoma
treatment of newly diagnosed with liposomal MTP-PE, 161-163

Pain management
measuring pain in pediatric oncology ICU patients, 64-68, 69-70
Faces Pain Rating Scale, 65
Objective Pain Scale, 65
Poker Chip Tool, 65
survey of nurses' knowledge of in pediatric cancer, 4-12
analgesic misconceptions, 5
assessment, 5
cancer pain, 6-7
commentary on, 13
results of, 7-11
using EMLA (eutectic mixture of local anesthetics), 38-41.
Pain scale(s)
evaluation of in pediatric oncology ICU patients, 64-68, 69-70
Parent(s), of pediatric oncology patients
concerns after child's discharge from bone marrow transplant unit, 93-101
fathers' stressors and coping strategies, 102-108
fever instruction with thermometers by contract, 164-166
parental refusal of treatment, 31-33
Patient education
video on care of permanent right atrial catheter, 120-124
Patient-nurse relationship, *see* Nurse-patient relationship
Patients' parent(s), *see* Parent(s)
Pediatric oncology nursing
crossing the lines of professionalism (editorial), 137
emotions involved in (letter), 92
establishing research priorities for, 20-27, 28-30
in Japan (letter), 138
measured intensity of work-related stressors in, 44-52
nursing perspective in (editorial), 1
promoting health in patients (editorial), 91
when nursing care becomes the therapy (editorial), 43
Pentamidine
pharmacology of, 85-87
adverse reactions, 86
availability, 85-86
dosage and administration, 85
indications, 85
mechanism of action, 85
pharmacokinetics, 85
stability and storage, 86
Pharmacology
amphotericin B and its lipid formulations, 125-127
EMLA (eutectic mixture of local anesthetics), 38-41
liposomal MTP-PE (muramyl tripeptide phosphatidylethanolamine), 161-163
pentamidine, 85-87
Pneumocystis carinii pneumonia
pentamidine treatment of immunosuppressed oncology patients, 85-87
Poker Chip Tool
measuring pain in pediatric oncology ICU patients, 64-68, 69-70
Preschool-age children
behavioral training of motion control for radiation treatment, 55-63
Prilocaine
in EMLA (eutectic mixture of local anesthetics), 38-41
Professionalism
crossing the lines of (editorial), 137

Quality of life issues
as top research priority for pediatric oncology nurses, 20, 22, 26, 28-30

Radiation treatment
behavioral training of motion control without sedation, 55-63
Research
establishing priorities for in pediatric oncology nursing, 20-27, 28-30
by months of practice in, 24-25
by nursing role, 26
categories of research ideas, 21
top five priorities in each practice setting, 23
top ten priorities identified, 22
informed consent in pediatric oncology, 128-133
nurse and physician responsibilities in, 130
protection of children as subjects in, 129
strategies to improve process of, 131
level III (experimental), 34-37
quasi-experimental design, 36-37
true experimental designs, 35-36
nontherapeutic research procedures in children with cancer, 134-136
Respiratory depression
and nurses' management of pediatric cancer pain, 8
Right atrial catheter, permanent
developing a patient education video on care of, 120-124
Roy's Adaptation Model
comparison of three theories for pediatric oncology nursing care, 14-19
environment, 15
health, 15
humans, 15
nursing and nursing process, 15-16
nursing care plan using, 16-17

School nurse(s)
program to bring childhood cancer information to, 88-90
Sedation
behavioral training of motion control for radiation treatment without, 55-63
Smoking
prevention in childhood cancer survivors, 167-171
Somatic response(s)
measurement of after bone marrow transplantation, 109-117
Spiritual issues
near-death experiences of children, 139-144
Stress
and coping strategies of fathers of children with cancer, 102-108

measured intensity of in pediatric oncology nursing, 44-52
commentary on, 53-54
Stressor Scale for Pediatric Oncology Nurses
measured intensity of work-related stressors, 44-52

Theory(ies), nursing
comparison of three for pediatric oncology nursing practice, 14-19
case study, 14-15
critique of theories, 17-19
overview of models, 15-16
Thermometer(s)
fever instruction with contract providing, 164-166
Thrombus
detection and treatment of central line, 146-151
Tobacco
smoking prevention in childhood cancer survivors, 167-171

Venous access device
central line thrombus detection and treatment, 146-151
Videotape(s), patient education
developing video on care of permanent right atrial catheter, 120-124

Work-related stress
measured intensity of in pediatric oncology nursing, 44-52
commentary on, 53-54
